

## Exercise 2a - String formatting

### Beskrivning

In order to print out a variable together with a string you can use cout with many "<<" and mix integer and strings.

To be able to use "cout" printing you first need to include the <iostream>

Example:

```
int number_of_cars = 3;

std::cout << "You have " << number_of_cars << " cars!";
```

Den här uppgiften är obligatorisk

### Exercise 2a

- Create the two variables number\_of\_brothers and number\_of\_sisters and assign them to number of brothers and sisters you have
- Print out something saying "*I have X brothers and Y sisters*" where X and Y are replaced with the variables you created
