

Inlämningsuppgift

Contact book including phone numbers

This assignment is to create a phone book with names and numbers. The contact book shall contain first name, last name, and phone number

- You can have the code from assignment 3a from lesson 3 as a good start to look at
- Create a class called Friend which will contain the three string class variables first_name, last_name and phone_number
- Create a class method called print_info which will print out the first_name, last_name and phone_number from the class in one single string
- Create a class method called add_friend that will ask the user for first_name, last_name and phone_number and save them. Choose a nice input phase before each input.
- Now we are done with the class, continue and create a list that contains Friend class elements, name it to list_of_friends
- Copy the print_menu function from assignment 3a
- Modify the view_friends function from assignment 3a to loop through Friend class and print them out with the class method print_info
- Modify the add_friend function from assignment 3a and create a new Friend class then call the add_friend method and save the new Friend to the list
- The main function can be copied from assignment 3a
- Add the function prototypes at the top of the file
 - void add_friend();
 - void view_friends();
 - void print_menu();

Good luck!
