

## Exercise 2g - The for-loop with Array

### Beskrivning

For-loops are excellent for iterate through any given list. For example, the below list of days in a week:

```
std::string weekday[] = {"Monday", "Tuesday", "Wednesday", "Thursday",  
"Friday", "Saturday", "Sunday"};  
  
for (int i=0; i < 7; i++)  
    std::cout << weekday[i] << std::endl;
```

However, if you don't know the number of items in the list you can use the range-based for loop.

```
std::string weekday[] = {"Monday", "Tuesday", "Wednesday", "Thursday",  
"Friday", "Saturday", "Sunday"};  
  
for (std::string day : weekday)  
    std::cout << day << std::endl;
```

### Exercise 2g

- Create a list containing all the months of the year
- Print out every month with the range-based for loop
