

## Exercise 2c - Namespace

### Beskrivning

A *namespace* can for example make it easier to use commands in C++. One traditional namespace is the *std* namespace that are used a lot in the code, for example the *cin*, *cout*, *string* etc are part of that namespace.

To use that *namespace*, you need to load it up with:

```
using namespace std;
```

When you have that line in the code the compiler automatically knows that you have that loaded and when you write *cout* it will automatically use the *std::cout* command (exactly the same):

### Exercise 2c

- Create a program that prints "Hello world !" using the *cout* command and the *std* namespace
