Assignment

Odd number finder (Optional)

This assignment is an optional bonus assignment for those who want to learn more comparison operators.

- Create a variable called number in the beginning of your program.

- Print out *"Enter a number",* in the terminal.

- Use std::cin to read value from keyboard and store it in variable number.

- Write an if-else-statement which will determine whether the number is odd or even

- If it is odd, it should print out *"The number is odd!"*, otherwise it should print out *"The number is even!"*

- Hint: *division* and *modulo*

Good luck!
