Inlämningsuppgift

Rövarspråket

In this optional bonus assignment you will create a encoder that converts the input to the famous "Rövarspråket"

Rövarspråket rules:

- If a vowel character or space appear just print it

- If a none vowel character appear, print character + "o" + character again

Example: "hello" will be "hohelollolo"

- Create a program that asks for a sentence

- Loop through all character with a while loop and check each character

- Print the "Rövarspråket" sentence on the console output

- The only supported input is characters and space

- To have support for both upper and lower case use *tolower()* function at input check

Example

Enter a sentence to convert to Rövarspråket: volvo is best

In Rövarspråket that sentence will be: vovololvovo isos bobesostot

Good luck!
