## Exercise 1a - Getting started with C++

In most programming languages you are able to write comments in the code which will be ignored by the compiler but are useful for us humans. To write a comment you use the "//" or "/*" "*/". See the following example:

// This is a "line" comment on a line and will not be executed

Or if you want to comment a block of text you can use "/*" and */

/*

This

section

will

not

be

executed

*/

Exercise 1a

-
- Go to this web site where you have the online C++ interpreter https://www.w3schools.com/cpp/trycpp.asp?filename=demo_helloworld
- This page will already give you a "Hello world!" code
- Add a comment to the code explaining that this is your very first Python program.
