Exercise 4d - Preprocessor

Beskrivning

Many times you need to know if you are running on linux, windows system etc. The reason because this is that the "low level" code differs.

#ifdef __linux__

//linux code goes here

#elif _WIN32

// windows code goes here

#else

// something else, maybe check for MAC also ?

#endi

Exercise 4d

- Create a simple program that uses #ifdef #elif above to detect if platform is linux or windows or unknown

- The code shall print "LINUX" if linux system, "WINDOWS if windows system. If system can note be detected it shall print "UNKNOWN"

- Navigate to https://www.onlinegdb.com/ and run your code
